

Amazon CodeWhisperer

Build applications faster and more securely
with your AI-powered productivity tool

Enrique Rodriguez Garrido

Solutions Architect
AWS Chile

Agenda

Customer challenges

Service overview, benefits, and features

Customers

Getting started

Quickly building reliable, secure code is challenging

Shortage of developers¹

Time spent on undifferentiated code

Appropriate use of open source

Data privacy

Time spent learning technologies, APIs, and best practices

Write secure code

¹Gartner: [2023 Planning Guide for Application Development](#)

CodeWhisperer

BUILD APPLICATIONS FASTER AND MORE SECURELY WITH YOUR AI-POWERED PRODUCTIVITY TOOL

Generate code suggestions in real time

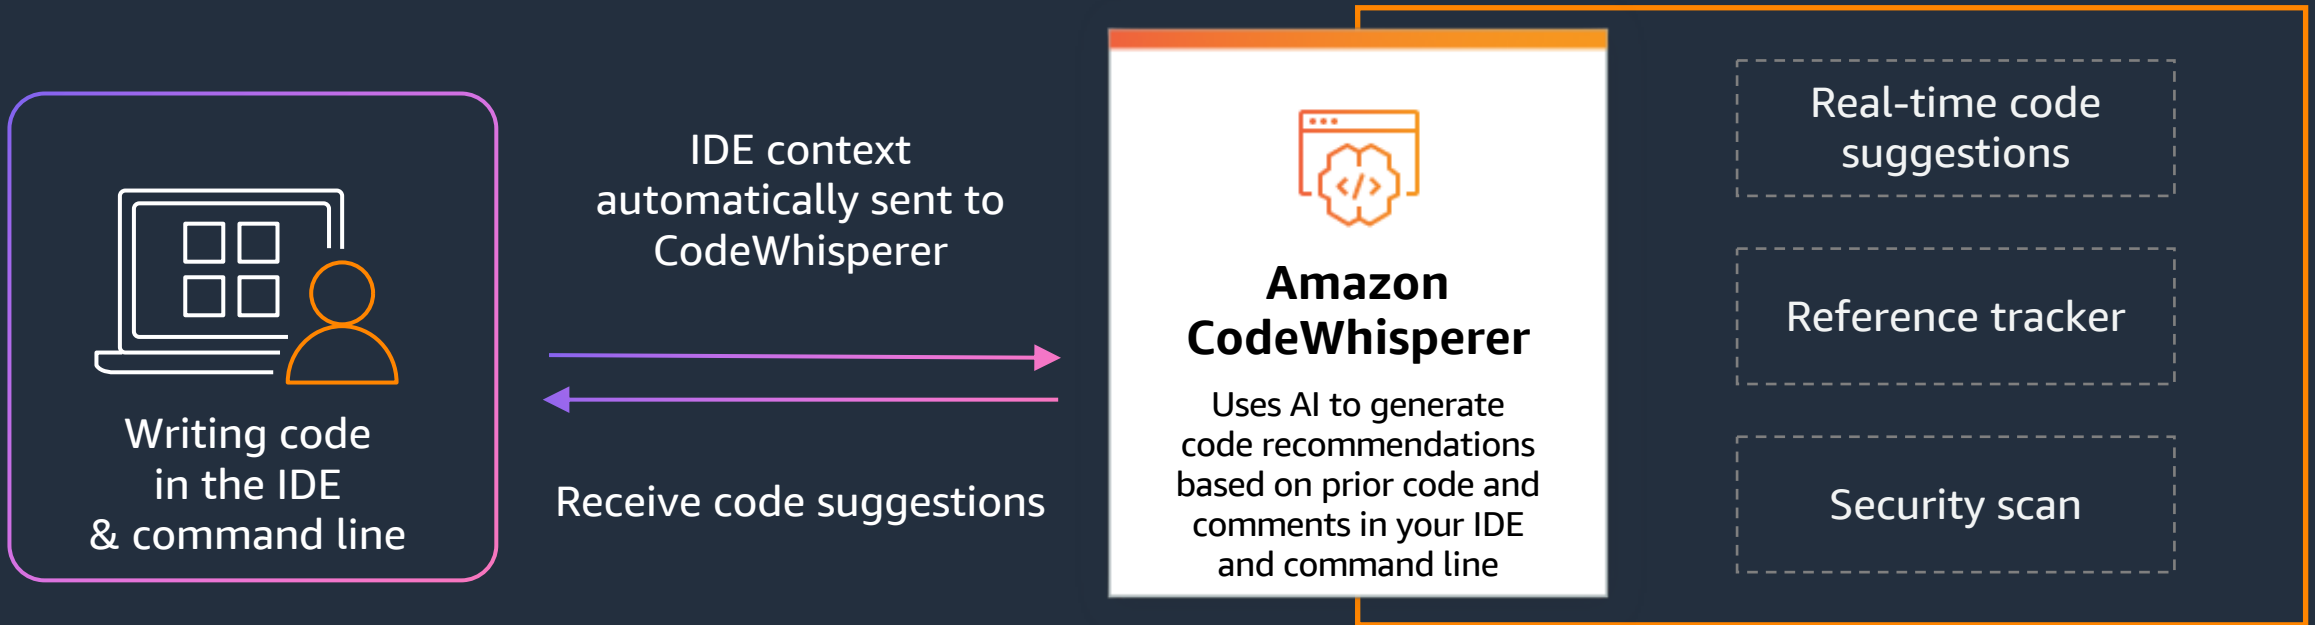

Scan code for hard-to-find vulnerabilities

Flag code that resembles open-source training data or filter by default

Amazon ran a productivity challenge, and participants who used CodeWhisperer were **27% more likely to complete tasks successfully and did so an average of 57% faster** than those who did not use CodeWhisperer

How it works

➔ **Content processed by CodeWhisperer Professional is not stored or used for service improvement**

Use with your tools

BUILD APPLICATIONS FASTER AND MORE SECURELY WITH YOUR AI-POWERED PRODUCTIVITY TOOL

Supported ecosystem programming languages

Python

Java

JavaScript

TypeScript

Rust

PHP

Kotlin

SQL

C#

Go

NEW

CloudFormation

CDK

Terraform

AND

Ruby, C, C++, Shell scripting, and Scala

Use with your tools

BUILD APPLICATIONS FASTER AND MORE SECURELY WITH YOUR AI-POWERED PRODUCTIVITY TOOL

Supported ecosystem

IDE's

JetBrains (incl. PyCharm, IntelliJ IDEA, WebStorm, CLion, PhpStorm, GoLand)

VS Code

Visual Studio 2022

AWS Cloud9

AWS Lambda console

Amazon SageMaker Studio, AWS Glue Studio

Benefits

Quickly accomplish
basic coding tasks

More easily use unfamiliar
APIs and frameworks

Get high-quality
suggestions for AWS
services

Use AI responsibly

Improve
application security

Use your
favorite tools

Code generation

- Get multiple code suggestions in seconds based on natural language (English) description of coding task and surrounding code
- Provides high-quality suggestions for popular AWS services
- Generated code matches developer style and patterns

Reference tracking

- Trained on billions of lines of code
- Flags code similar to open-source training data
- Tracks accepted suggestions so that you can provide appropriate attribution
- Enterprise controls to more easily deactivate/filter code suggestions similar to open-source training data

```
ion to iterate over an S3 bucket and send the files to a lambda  
const getFiles = async (bucketName, S3Client) => {
```

reference code under MIT License.

```
params = {  
  bucket: bucketName,
```

```
files = [];  
truncated = true;  
continuationToken;
```

```
(isTruncated) {  
  const response = await s3Client.listObjectsV2(params);  
  truncated = response.IsTruncated;
```

```
contin  
spons
```

```
return
```

✓ CodeWhisperer reference log

[3/24/2023, 3:17:34 PM] Accepted recommendation with c
`response.Contents.forEach((file) => files.push(file.K`
with reference under MIT from repository `function-temp`
`/demos/reference-tracker.js` (line at 14).

Security scanning

- Scan generated and developer-written code to detect security vulnerabilities
- Receive vulnerability remediation suggestions
- Scan for hard-to-find security vulnerabilities
- Supports VS Code and JetBrains IDEs for Python, Java, and JavaScript

🟢 Security scan completed. 3 issues found.

lambda_function.py

user/projects/

Not setting the S3 bucket owner condition might introduce accidentally using a wrong bucket. For example, a configuration lead to accidentally writing production data into test a

The elevated privilege level required to perform operation immediately after the operation is performed. [Line 16]

Recreating AWS clients from scratch in each Lambda function expensive and can lead to availability risks. Clients should be reused in invocations. [Line 190]

NEW

Code generation for the command line

- Contextual CLI completions and AI natural-language-to-bash translation
 - IDE-style completions for 500+ CLIs
 - Natural language-to-bash translation (Enter 'q!')

});

Enterprise controls

- Provision and manage team access through AWS IAM Identity Center and single sign-on
- Set organizational policies, such as automatic filtering of code suggestions similar to open-source code

Amazon CodeWhisperer > Set up CodeWhisperer

Set up CodeWhisperer

Select which users and groups in your organization have access to CodeWhisperer. Authorized users can activate CodeWhisperer through the AWS Toolkit in Visual Studio Code, AWS Cloud9 or JetBrains. CodeWhisperer will then provide suggestions, inside the IDE, for completing the user's code. Before users and groups appear in the lists below, you must add them to your organization in IAM Identity Center. [IAM Identity Center](#)

Details

This setting applies to all users and groups.

Suggestions

☒ **Include suggestions with code references**

CodeWhisperer learns, in part, from open-source projects. Sometimes, a suggestion it's giving you may be similar to a specific piece of training data. Keeping this box checked allows CodeWhisperer to offer suggestions in such cases. CodeWhisperer will also provide references, so that you can learn more about where the training data comes from. Un-checking this box causes CodeWhisperer to hide recommendations that have references associated with them.

Terms

By setting up CodeWhisperer, you agree to the terms.
